Professional Summary

Results-driven DevOps Engineer with 2 years of experience designing and operating cloud-native infrastructure on AWS. Proven track record of reducing deployment times by 30%, eliminating infrastructure drift via 100% IaC adoption, and securing production environments across 50+ Linux servers. Holds RHCSA, RHCE, and EX180 certifications with hands-on expertise in Kubernetes, Terraform, and CI/CD automation.

Experience

DevOps Engineer

Nov 2024 – Apr 2026

GIP TECHNOLOGIES PVT. LTD.

Jaipur, India (Remote)

- Administered 50+ Linux servers (RHEL, CentOS, Ubuntu) and DNS configurations; implemented security hardening, user lifecycle management, and shell scripting automation, reducing manual intervention by 40%.
- Managed containerized applications on Amazon ECS and Kubernetes, used deployment strategy rolling updates and enable health checks across 40+ microservices.
- Designed and provisioned production-grade AWS infrastructure (EC2, VPC, ALB, RDS, CloudFront) using modular Terraform and Ansible, achieving 100% IaC consistency and cutting environment setup time by 60%.
- Architected CI/CD pipelines with Jenkins and GitHub Actions, incorporating automated testing, Trivy security scanning, and ECR image management for blue-green deployments, reducing failed releases by 35% and enabling daily release cadence.
- Implemented GitOps workflows using ArgoCD for declarative, auditable Kubernetes deployments, improving rollback speed and team collaboration across environments.

DevOps Intern

May 2024 – Oct 2024

GIP TECHNOLOGIES PVT. LTD.

Jaipur, India (Remote)

- Automated routine server provisioning and configuration tasks using Bash and Python scripts, reducing provisioning time by 25% and eliminating repetitive manual steps.
- Contributed to containerizing legacy applications with Docker and authored Kubernetes manifests for staging environments, accelerating the team's migration from VMs to containers.
- Monitored system performance using Prometheus and Grafana, generating weekly availability and resource utilisation reports to proactively surface bottlenecks.

Technical Skills

- **Container & Orchestration:** Kubernetes (HPA, Helm, Ingress, RBAC), Docker, Amazon ECS
- **Cloud (AWS):** EC2, VPC, IAM, Route53, S3, Lambda, RDS, DynamoDB, ECR, EKS, ECS, SQS, SNS, CloudWatch, CloudTrail, Secrets Manager, SSM
- **GitOps & VCS:** ArgoCD, Git, GitHub
- **IaC & Config Management:** Terraform (modules, remote state, state locking), CloudFormation, Ansible, Packer
- **CI/CD:** Jenkins, GitHub Actions, Trivy (container security scanning)
- **Monitoring & Observability:** Prometheus, Grafana, CloudWatch, ELK Stack (basic)
- **Linux:** RHEL, CentOS, Ubuntu — administration, hardening, user management
- **Scripting:** Bash (automation, cron jobs, server hardening), Python (boto3, Lambda functions)

Projects

AWS Scalable Web Application Deployment (Terraform & Packer)

📄 github.com/mahin556/InfraStackPro

- Provisioned a production-grade AWS environment (VPC with public/private subnets, NAT Gateway, ALB, Auto Scaling Groups, RDS MySQL) using modular Terraform, reducing manual setup time by over 80%.
- Automated golden AMI builds with Packer and shell provisioners to pre-install dependencies, ensuring environment consistency and cutting instance cold-start time across all deployments.
- Achieved zero-downtime deployments by configuring ALB health checks, rolling update policies in Auto Scaling, and multi-AZ RDS failover to absorb traffic spikes without service interruption.
- Eliminated hardcoded credentials by integrating AWS Secrets Manager and SSM Parameter Store for dynamic runtime secret injection, with least-privilege IAM roles across all compute resources.
- Structured Terraform with reusable modules and S3 remote state with DynamoDB locking, enabling safe team collaboration and drift detection.

AWS Serverless Student Management System

 github.com/mahin556/cloud-serverless-project

- Architected a fully serverless backend using API Gateway (REST), AWS Lambda (Python), and DynamoDB, eliminating server management overhead and enabling automatic scaling for variable load.
- Implemented CRUD operations via Lambda functions with a DynamoDB single-table design optimised for low-latency reads and writes, triggered by API Gateway routes.
- Integrated AWS Amplify for frontend hosting with a built-in CI/CD pipeline, enabling automatic deployments on every Git push across a full-stack serverless architecture.
- Defined the entire stack as code using Terraform with per-function IAM roles enforcing least-privilege access, enabling reproducible one-command deployments across environments.

Kubernetes-Based Microservices Deployment on AWS

 github.com/mahin556/gowebapp-config

- Orchestrated a multi-service Go web application on Amazon EKS using Helm charts for modular, parameterised, and environment-agnostic deployments across Deployments, Services, ConfigMaps, and Secrets.
- Configured HPA based on CPU/memory metrics via Kubernetes Metrics Server, enabling automatic pod scaling under load and scale-down during idle periods to optimise costs.
- Secured external traffic with NGINX Ingress Controller and TLS termination via cert-manager and Let's Encrypt, ensuring end-to-end encryption without manual certificate management.
- Followed GitOps pattern by maintaining all Kubernetes manifests in a dedicated config repository, enabling auditable, rollback-friendly infra changes separate from application code.

Certifications & Professional Development

- **Red Hat Certified Engineer (RHCE)** Issued: April 2025
 Verify Credential
- **Red Hat Certified Specialist in Containers & Kubernetes (EX180)** Issued: February 2025
Note: Add unique verification URL for this credential
 Verify Credential
- **Red Hat Certified System Administrator (RHCSA)** Issued: January 2025
 Verify Credential

Education

Bachelor of Technology (B.Tech) in Computer Science

2020 – 2024

Arya College of Engineering & Research Center

Jaipur, Rajasthan, India
